

Installers, why do you need NAS ?

With ever-increasing amounts of videos from high-resolution IP cameras, and longer retention periods, NAS is no longer limited to enterprise installations.

More and more installers are sourcing NAS solution for their customer because...

- ✓ Customers ask to store videos for a longer retention time, perhaps required by law or business mandates.
- ✓ Customers need to keep good amount of videos, as strategic source for insightful and actionable analysis.
- ✓ Customers ask about redundancy.

Why GeoVision NAS ?

- ✓ Designed specially to store IP surveillance videos, optimized for write-intensive nature of video applications.
- ✓ Very IT-friendly! Plug-and-play setup !

How often do they look
at the surveillance screen

Most store owners only look at the
video data when needed. They won't
need to look at the monitor all the time.

No monitor. More space.

Perfect sites for NAS installation.

Just Record.

Start with an IP cam / NAS Package

To help you get started, GeoVision offers a complete integrated IP cam/NAS solution, of which includes everything you need to start a surveillance system solution.

Is IP cam / NAS package for me ?

If you are installing IP cameras with on-board storage looking for an easy and centralized setup and support for your client.

- ✓ The IP cam/NAS package guarantees a full compatibility amongst cameras and storage, with full-featured Edge Recording Manager for setup, live view, and playback.
- ✓ No more climbing up and down to replace your on-board storage device, for each single camera.
- ✓ The package is IT-friendly, guarantees the ease and comfort of installation, with every element you need to get started.

If you are moving away from analog into digital...

- ✓ Easy setup, IT-friendly.

More for advanced users ! Feel conformable to offer these to your customers !

- ✓ Streaming stored videos and images to any media player !

GV-NAS2008 System can be a DLNA server from which you can stream the stored videos and images to any network-connected home media player like smart TV or a Windows Home Theatre PC.

- ✓ Customized storage threshold

GV-NAS2008 System allows you to customize storage threshold for each camera. The camera with larger file sizes or critical scenes can be thus assigned more storage space.

- ✓ Accessible or restricted to content

You can even define access rights for each user or a group of users, allowing or restricting access to a storage folder for recording playback.

- ✓ Advanced notice for hard disk emergency

GV-NAS2008 System features S.M.A.R.T (Self-Monitoring, Analysis and Reporting Technology) to detect hard drive problems and allow you to back up data at the first moment when receiving e-mail alert.
